

# The Winds of Change: Environmental Impacts from an Altered Climate

All images courtesy of Wikimedia Commons (<https://commons.wikimedia.org>)

Climate change is predicted to have far-reaching impacts beyond modified weather patterns. A changing climate is expected to alter habitats causing wildlife and plants to migrate into new areas as 'invasive' species and to increase the impact of coastal hazards on beaches and estuaries. Join this webinar series to learn about these changes and how efforts, such as food waste reduction, are working to alleviate climate change.

October 8 – *Climate Change and Species Movement.*  
Dr. Julie Lockwood, Rutgers University

October 15 – *Food Waste and Climate Change.*  
Dr. Amy Rowe, Rutgers University

October 24 – *Climate Change and Coastal Hazards.*  
Dr. James Shope and Amanda Archer, Rutgers University

October 30 – *Trees of the Living Dead: How to Remove Aggressively Sprouting Invasive Trees.*  
Jean Epiphan, Rutgers University

November 4 – *Invasive Insect Species.*  
Dr. George Hamilton, Rutgers University

November 12 – *New Jersey's Changing Estuaries.*  
Dr. Ken Able, Rutgers University

**All webinars start at 6:30pm**
